<sup>1.</sup> Add "C6", C8, "C14" or ""C18" for the required AC input connector configuration.

- The output voltage is verified to specs at 60 percent rated load condition.
- $\bullet \quad \text{The line regulation is defined by changing} \pm 10 \text{ percent of input voltage from the nominal line at rated load.}$
- The load regulation is defined by changing ± 40 percent of the measured output load from 60 percent of the rated load.
- The **ripple and noise** is measured by using 20MHz bandwidth limited oscilloscope with each output terminated with a 10 μF electrolytic and a 0.1 μF capacitor at rated load and nominal line.
- The efficiency is measured at rated load and nominal line.
